Committee on Technical Barriers to Trade

NOTIFICATIONS ISSUED DURING THE MONTH OF NOVEMBER

In the Second Triennial Review of the Operation and Implementation of the TBT Agreement (concluded in November 2000), Members instructed the Secretariat to prepare a monthly list of notifications. The attached table contains a list of all notifications issued during the month of November, which includes a total of new notifications by Members.

	26 November 2018			

European Union	G/TBT/N/EU/617	[X] 2.9.2	Ethoprophos (pesticide active	Protection of human health or	31 December 2018
	1 November 2018		substance)	safety; protection of animal or	
				plant life or health; protection	
				of the environment.	
				In order for an active substance	
				to be approved in accordance	
				with Regulation	
				(EC) No 1107/2009 (concerning	
				the placing of plant protection	
				products on the market), it	
				must be demonstrated that the	
				substance is not harmful to	
				human health, animal health or	
				the environment. Criteria are	
				listed in Article 4 of the	
				Regulation (and also detailed in	
				Annex II) which must be met to	
				enable approval.	
				During the evaluation and peer-	
				review of ethoprophos, a	
				number of concerns and areas	
				that could not be finalised were	
				identified. These are detailed in	
				the conclusion of the European	
				Food Safety Authority (EFSA).	
				In particular, it was not possible	
				to conclude on the genotoxic	
				potential of ethoprophos and no	
				final health-based reference	
				values could be established.	
				Consequently, the consumer	
				and non-dietary risk	
				asessements could not be	
				conducted.	

- 1
9

A high acute risk to birds and a
high risk to soil dwelling non-
target arthropods and to soil
organisms was identified. In
addition, the Authority
concluded that several areas of
the risk assessment could not
be finalised including the
consumer assessment with
respect to residues in food of
plant and animal origin, the
assessment of developmental
neurotoxicity, the groundwater
exposure assessment, the long-
term risk to birds, the
assessment of secondary
poisoning for birds and
mammals, the risk to soil
organisms from exposure to
metabolites of ethoprophos and
the risk to earthworms.
Finally, the Authority concluded
that assessment of the
endocrine disrupting potential
could not be concluded.
These concerns mean that
ethoprophos does not meet the
approval criteria as outlined in
Regulation (EC) No 1107/2009
and cannot be approved
currently.
Existing authorisations will need
to be withdrawn; EU Member
States must withdraw existing

			plant protection products containing ethoprophos at the latest by 6 months from the date of entry into force. A period of grace in line with Article 46 of Regulation 1107/2009 is allowed for and shall expire at the latest 12 months from the entry into force.	
G/TBT/N/EU/618 7 November 2018	[] 2.9.2 [X] 5.6.2	Construction products	According to the available information, the existing classes are not sufficient for all the products at hand, since new kinds of products in this field have been developed more recently, representing a higher wind resistance than before. The use of the existing classes may also in some cases lead to safety problems linked to the fixing of the products. For those reasons, the classification of the performance in question would need to be enlarged, but differentiated among the various product subfamilies covered by standard EN 13561.	January 2019

on individual rooflights of
plastics was first published
under Directive 89/106/EEC in
the Official Journal of the
European Union in June 2006.
This harmonised standard did
not contain a classification for
the performance of the products
covered by it in relation to the
essential characteristic air
permeability.
Recently, the European
Committee for Standardisation
(CEN) submitted to the
Commission a new version of
this standard, EN
1873:2014+A1:2016. This
version comprises a
classification for the
performance of the products
covered by it in relation to the
essential characteristic air
permeability, with three classes
of performance introduced. This
standard is currently under
revision in CEN, so as to cover
rooflights of plastics and glass
and roof hatches. It is planned
to have three parts in its next

Construction products

G/TBT/N/EU/619

15 November 2018

	three parts are to contain the
	said classification.
	The reference to the European
	product standard EN
	14963:2006 on continuous
	rooflights of plastics was first
	published under Directive
	89/106/EEC in the Official
	Journal of the European Union
	in July 2009. This harmonised
	standard did not contain a
	classification for the
	performance of the products
	covered by it in relation to the
	essential characteristic air
	permeability.
	Recently, CEN informed the
	Commission that the next
	revised version of this standard
	will comprise the same
	classification for the
	performance of the products
	covered by it in relation to the
	essential characteristic air
	permeability as introduced in EN
	1873.
	According to the above
	standards, the assessment of
	performance in relation to air
	permeability is to be carried out
	by using different levels of
	internal pressure, increasing
	stepwise from the level of 4 Pa
	to the level of 100 Pa. The
	to the level of 100 fat. The
