**NATIONAL FOREWORD**

This Sri Lanka Standard was approved by the Sectoral Committee on Food Products and was authorized for adoption and publication as a Sri Lanka Standard by the Council of the Sri Lanka Standards Institution on .....

This Standard is identical with **ISO/TS 20388: 2021** Biotechnology – Biobanking – Requirements for animal biological material which is published by the International Organization for Standardization (ISO).

This Standard specifies requirements for the collection, reception, preparation, preservation, transport, storage, distribution, destruction and disposal of biological materials obtained from animals, excluding humans. Such resources include solid tissues, fluid samples and associated cells, excretory products and associated data.

This Standard is applicable to biological material or associated data, or both, that can be used for research and development and to biomolecules derived from the biological material, e.g. nucleic acids, proteins and metabolites.

This Standard is applicable to all organizations performing biobanking for research and development. This Standard does not apply to biological material intended for food or feed production, laboratories undertaking analysis for food or feed production, or therapeutic use, or multiple of them. This Standard does not apply to the establishment of cell lines derived from animal biological material.

**Terminology and conventions:**

The text of the International Standard has been accepted as suitable for publication, without deviation, as a Sri Lanka Standard. However, certain terminology and conventions are not identical with those used in Sri Lanka Standards. Attention is therefore drawn to the following:

- a) Wherever the words “International Standard” appear referring to this Standard, it should be interpreted as “Sri Lanka Standard”.
- b) The comma has been used throughout as a decimal marker. In Sri Lanka Standards it is the current practice to use the full point on the base line as the decimal marker.
- c) Wherever page numbers are quoted, they are ISO page numbers.
